

TINTIC BODY HIGH GRADE COPPER ORE

With Depth Ludwig Resources
Are Showing Better Values
and Extent.

UPRAISE GOING INTO
FIFTEEN FEET OF ORE

All Contains Sufficiently High
Red Metal Contents to
Ship Direct.

The local management of the Nevada Douglas Copper company is in receipt of some highly gratifying news from the work being carried forward upon the Ludwig property at Yerington. The most striking interest point at this time is the upraise being sent from the 500 to the 400-foot levels. This upraise is going up upon a body of solid shipping ore fifteen feet in width. Above the 400-foot level, this same chute was developed for a total length of 350 feet, and with an average width of from five to six feet. The manner in which the chute is showing up a hundred feet below, therefore, means a great deal to the present management.

This evidence of the continuity of the Ludwig ore bodies with depth is being added to by the developments upon the 550 foot level of the mine. On this level is an ore body running from thirty to sixty feet in width, and averaging 10 per cent copper for twenty feet of that distance, while a winze being driven from the drift is demonstrating the continued permanency of the chutes. From this winze in one week's time was extracted in development work a total of forty-two tons of ore, whose copper contents averaged 18.26 per cent. The face of the east crosscut on the 550 level shows an average copper value of 3 per cent.

All over the Ludwig property nothing is being done aside from development work. This is true upon the 400-foot level, and during the past week sixteen shifts, or three men, extracted twenty-five tons of ore that averaged 17.25 per cent copper. The Nevada Douglas company proper is pursuing its plan of development work upon the Douglas group, everything being in order for the electric power. The various workings are exhibiting the usual splendid copper values, and nothing in the way of results is left to be desired.

EAST TINTIC GEOLOGY.

Some Interesting Geological Deductions Will Be Available Soon.

The East Tintic section of the camp of that name is attracting attention at this time never before equaled, and many interesting pieces of development work are under way to establish this part of the camp in the production column. It is the scene of many of the Jesse Knight new organizations, spurred on by the development in the Colorado, Beck Tunnel, Uncle Sam Humbug ground and others. Not only have the miners become busy there, but the geologists also, and the present pursuits of the latter promise to be of equal interest and value as the former.

It is stated that Mr. Jensen of the East Tintic company is completing a survey of the property both geologically and for the purpose of securing a patent upon the same. In a short time some very interesting geological deductions are certain which will tend to anticipate the results sought for by all whose properties lie in a position to be affected by the same. It is understood that interesting conclusions will be available by which several properties should secure ore bodies in the Humbug limestone zone, figuring the same from the basis of dip. It is the same theory upon which is based the developed ore chutes of the Colorado and Beck Tunnel, and upon which the Crown Point and others supposedly in line for the same are now depending. There are few more interesting spots in mining at present, and the work of these scientists will be watched closely.

UTAH SMELTING CO.

ODGEN, UTAH.

BUYERS OF ORES.

NEW COMPANY FORMED BY LOCAL INVESTORS

Big Group Adjoining Mountain
Lake Possessions Now in
Strong Hands.

Articles of incorporation were filed in this city Saturday afternoon by the Mountain Lake Extension Mining company. The company is capitalized for one million shares, of a par value of 10 cents each, 700,000 shares of which are reserved as treasury stock. L. A. Palmer is president; L. P. Palmer, vice president; H. C. Edwards, treasurer. These gentlemen, with J. E. Frick and G. M. Sullivan, complete the board of directors. F. O. Frick is secretary, and in addition to the above-named officials, all of whom were incorporators, L. A. Jeffs, the mining engineer, was an incorporator.

The Mountain Lake Extension company is the result of a consolidation between the old Zena company's holdings and the individual holdings there of L. A. Christink and L. A. Jeffs. The group consists of ten claims, the same being surveyed for a patent. The property adjoins the possessions of the Mountain Lake company on the southeast, being between that property and the Pittsburg company's holdings. The group is situated upon the northeast and southwest mineral zone, the mineral wealth of which is being shown at this time by the Mountain Lake operations.

A great deal of work already has been accomplished upon this property. This development work consists of numerous short tunnels, one shaft and a main tunnel now in fifty feet. It is the purpose of the company to continue this latter tunnel in for a total distance of 500 feet, at which point some interesting disclosures are anticipated. The particular portion of the State in which these properties are located is fast assuming importance, the work already done illustrating what can be secured upon the application of deep workings. The Mountain Lake long tunnel, contract for which has been let, will open up the resources of that property at great length, and the organizers of the Extension company are certain that this tunnel will likewise demonstrate the merits of their own proposition.

TINTIC ORE SHIPMENTS AGGREGATE 141 CARS

Special to The Tribune.

EUREKA, Aug. 17.—Ore shipments for the week are as follows: Centennial, 30 cars; Beck Tunnel, 8 cars; Colorado, 7 cars; Yankee Consolidated, 4 cars; May Day, 4 cars; Gemini, 5 cars; Bullion Beck, 1 car; Seranton, 7 cars; Lower Mammoth, 6 cars; Mammoth, 8 cars; Ajax, 2 cars; Grand Central, 8 cars; Victoria, 1 car; Laclede, 1 car; Carissa, 7 cars; Ridge and Valley, 3 cars; Bullock Lease, 1 car; Eureka Hill, 4 cars; Eagle and Blue Bell, 8 cars; Clift, 1 car; Swanee, 1 car. Total, 141 cars. Concentrates, Godiva Mill, 1 car.

STRIKE NEAR TENABO.

Rich Gold Ore Found Just North of Booming District.

Gold ore containing nuggets of the yellow metal, is the way those returning from the Tenabo section of Nevada describe the new strike of the yellow metal about five miles north of Tenabo. The extent of this find has not been determined, as the inability to get messages through has closed the usual channels of information. Placer gold, it is said, has been found in this portion of Nevada for several years, but not until a short time ago were prospectors able to find any ledges containing the metal. The find is one of the richest so far brought to light in Nevada, the only question being now as to its extent and permanence. As usual, Salt Lake has representatives there, and upon their return something more definite will be learned.

Ogden Ore Shipments.

Special to The Tribune.

OGDEN, Aug. 17.—Ore shipments to-day at the Utah smelter consisted of two cars of Mammoth. Fifteen other cars are in the Ogden yards, but they cannot be switched to smelters for some reason or other.

An Automobile Snap.

A 10-45-horsepower model Winton 1907. The car has been used only three months and is as good as new. With all accessories the car cost \$4200, and it may be had complete at a liberal discount. Owner selling on account of leaving the city. This is a great bargain for intending purchasers. A big snap for the right buyer. Apply at 233 Commercial Club building.

DAY ON 'CHANGE.

Saturday Morning Session Closed a Very Satisfactory Week.

Saturday morning's session on the local exchange closed a very satisfactory week's business, the amount of business transacted during this period being over and above expectations for such a season of the year. During the week 459,995 shares passed hands, representing a market value of \$22,400.40. Saturday morning 47,665 shares were sold, having a market value of \$40,987.50. The following were the unlisted stock transactions:

E. M. WEST VISITS MINES OF TINTIC

Sees Colorado, Beck Tunnel,
Uncle Sam and May Day
Developments.

ALL FOUND TO BE
IN FINE CONDITION

New Bodies of Rich Ore Are Being
Found, With More
to Come.

"During my visit to the Tintic section," stated E. M. West Saturday, upon his return to this city from the district in question, "I had the pleasure of going through the May Day, the Uncle Sam, Beck Tunnel and the Colorado mines. I doubt if a quartette of more promising properties can be found so bunched anywhere else in all the State of Utah. The May Day certainly looks a hundred per cent better than ever before. On the 240-foot level there is as pretty a breast of ore as one could wish to see. This chute is 20 feet in width, and from my samples the whole face averages 172 ounces silver, 22 per cent lead and some gold to the ton.

"This vein is showing up very strong, and will make clear across the May Day and the old Uncle Sam property now the possession of the former. At a point 1200 feet to the northwest, the company is sending out a crosscut for the purpose of tapping the same vein. Yesterday one-half of the face of this crosscut was as fine a character of lime as a Tintic miner could wish for, the other half was quartz and spar. Superintendent Griggs expressed his opinion that this drift would encounter a good ore body inside of a week. This vein is a new one, and it is in virgin ground.

"On the 400 foot level of the mine, the management has found another strong ore body. This is a splendid resource, and although I secured no samples for assay, I believe that the whole thing will run between \$35 and \$40 to the ton. On the 450-foot level, and on the old Uncle Sam line, there is practically a solid body of first-class rock. Mr. Griggs stated to me that he estimated there was fully \$150,000 worth of ore in this one chute. A drift is being commenced from the 700-foot station of the old Uncle Sam shaft to get in under the ore body had upon the 250 level, and splendid results are almost certain from this work. There is a great tonnage of milling ore in sight in the May Day. This milling ore with the increased capacity of the mill, will pay all the expenses of the property, thus allowing shipments of the richer ore to be clear profit.

"The Humbug property of the Uncle Sam Consolidated company is proving a most gratifying surprise even to its firmest friends. The point where ore has first encountered has been shown to be the junction between two veins. One runs in a northerly direction, and the other north of west. The company is sending an upraise there into \$40 to \$50 ore, this upraise being now 70 feet from the starting point. On the tunnel level to the north, there are 30 feet yet to be driven before connections will be made with the Yankee workings for air. The lack of proper air has been a serious drawback, and will be remedied by this connection. From recent surveys it has been demonstrated that the Uncle Sam workings are just above the Yankee chute, instead of being below it, as was thought at first, and this widens the possibilities for the property greatly.

"The workings to the south are displaying very high grade values. The present south face runs 66.140 gold, 55 ounces silver and 24 per cent lead to the ton. This vein is growing stronger as work proceeds, and it certainly is full of immense promise. In proceeding from the tunnel level the management encountered a cross fissure which has led into a cave, on both sides of which is ore of good grade. In the next three or four days a fine ore body in all likelihood will be found there. The Uncle Sam ore bins are full of shipping rock, and there is a handsome tonnage piled up in the workings awaiting disposition.

"The Beck Tunnel property has an immense tonnage of low-grade ore. The working to the north shows a face of eight feet, all ore that will average over 120 ounces silver to the ton. This face is now about half way between the new and the old shaft. The Colorado is so big that a person would need more time than I had to make a thorough inspection. It looks like one of the biggest mines in the State, and I deem it merely started upon its most brilliant career. I want to say that the various managements of the four mines deserve great credit for the splendid manner in which they have attended to their duties."

ough inspection. It looks like one of the biggest mines in the State, and I deem it merely started upon its most brilliant career. I want to say that the various managements of the four mines deserve great credit for the splendid manner in which they have attended to their duties."
